

## Battery Removal for SGP

At Motortronics UK, we aim to be as environmentally conscientious as we can. To this end the Battery Directive is proposing a change whereby all batteries should be readily removable and recyclable by the end-user.

These instructions show the process for doing this on our Synergy Plus units. The battery removal tool can be requested/ordered FOC via our Sales Department.

<b>1</b>	Place unit on flat surface. 	<b>4</b>	Get replacement battery (CR1632 Button battery). 
<b>2</b>	Remove the small expansion slot cover from the cassette. Take the battery removal tool and slide into the opening towards the battery, push lightly until you cannot push it in further. 	<b>5</b>	Insert battery into the opening, using the opposite end of the tool to push the battery into its housing, when you hear a light click, stop. 
<b>3</b>	Pull tool out slowly. 	<b>6</b>	Remove the tool and place the panel back on.
